Implementation Science Strategic Planning Tool For Researchers

- Publish in open access and/or practitioner oriented journals. Use accessible language and avoid jargon.

- Publish or provide succinct summaries of your work in accessible locations (blogs, interviews, etc.) using plain language.

- Include detailed information about subjects and local contexts, such that practitioners can compare to their own context.

- Include explicit recommendations for practice, including ideas for how this work could be implemented in a practice setting or how it could inform the practice of an educator or clinician.

- Generate practical tools and resources developed from the principles of your work (lesson plans, student materials, checklists) and make them available to practitioners.
